

# Automating AP with DragItIn and ETL

Southern Cross Health Society is an innovative organisation undertaking a project to evolve from a manual and paper-based Accounts Payable (AP) data entry process to completely paperless. This project has resulted in increased productivity and improved the overall efficiency of the finance team.

"Like many organisations, we used to have a predominantly paper-based AP process with manual data entry. As an organisation, we continually look for ways to improve what we do, so we initiated a project to automate and streamline our AP processing. The project has been a huge success as our team now has more time to focus on business partnering as the demands of manual data entry have been reduced."

Dreeson Andrew, Financial Controller at Southern Cross Health Society (Auckland, NZ)

**Removed manual data entry by going paperless**

"Paperless is the way of the future and this is just a part of our journey. We've automated AP data entry and for the next stage we are focussing on paperless approval processes so that we'll soon be fully digital. Beyond that we will turn our attention to running analytics and fraud and risk management tools over our purchase information to guide our efforts to where we will get the best results."

**Improved the finance team's productivity**

"Importing electronic invoices directly into the system has freed up our time and allowed the finance team to grow our influence as a strategic partner of the business."

**Halved invoice processing times**

"Today, we've halved the processing time per invoice and expect this to reduce further as we refine the import process and expand its use across other processes."

**Improved processing accuracy to 100 %**

"We now have no human error due to data entry. The new process is incredibly accurate. It's also greatly reduced the chance of suspicious claims being processed and paid."

Automating AP data entry is achieved with TechnologyOne DragItIn and ETL. It enables you to reduce time and increase productivity in your Accounts Payable department by automating invoice processing into TechnologyOne Financials. Automating this step can save your organisation significant time and money.
